Profile

Developer with over 3 years of experience in React Native, React, and Next.js. At Comnet, I developed critical customer panels and CRM systems, gaining expertise in large-scale data management and API integrations. In my ongoing freelance career, I recently built and launched the 'Ehliyet Rehberi' mobile application, managing the entire process end-to-end (design, development, and App Store/Google Play publishing), which is currently generating active revenue. I am proficient in high-performance, reliable, and user-focused UI/UX principles, and capable of delivering end-to-end solutions both within teams and independently.

Experience

Mobile & Frontend Developer • Freelance (Project Based) • Feb 2025 - Present

- **Ehliyet Rehberi:** Launched a mobile application where I managed the entire process, including design, React Native development, and App Store/Google Play publishing; currently handling monthly active user management and App Store Optimization (ASO) processes.
- **Next.js & React Native Çözümleri:** Developed modern web and mobile interfaces for clients across various industries, implementing RESTful API integrations and establishing scalable state management architectures.

Frontend Developer • Comnet Türkiye • Oct 2023 - Feb 2025

- **CRM & User Panels:** Developed CRM systems and landing pages serving over 50,000 active users using React, Next.js, and TypeScript.
- **React Native Development:** Migrated critical onboarding processes—such as E-Devlet identity verification, subscription setup, and contract approval—to mobile using React Native, making them available to over 20,000 mobile subscribers.
- **CI/CD ve Deployment:** Designed and implemented automated deployment processes using GitHub webhooks and PM2, minimizing manual errors and improving release reliability.

Featu

Ehliyet Rehberi - [App Store](#) - [Play Store](#)

Built a high-performance, cross-platform user experience featuring interactive exam simulations using Expo Router, Zustand, and NativeWind. Designed and implemented a sustainable monetization model by integrating in-app purchases and subscription systems with RevenueCat.

Mia Meal Planner - [App Store](#)

Developed an Expo-based meal planning application. Designed and implemented a system that uses the OpenAI GPT-4.1-nano model to extract structured JSON data from websites and import recipes directly into the application.

Storygen - storygen.furkanleba.com - github.com/elbaley/next-storygen

Developed a React-Konva-based visual editor using *Next.js 15* and *Cloudflare KV*, enabling users to create and share dynamic stories.

Education

Istanbul University - Cerrahpasa - English Language Teaching - 2023
